

SERIES 6.1.44

SUPPORT FOR AutoCAD 2010

Version 44 is supporting AutoCAD 2010, AutoCAD MAP 2010 and AutoCAD Civil3D 2010. Since now we have TWO installation EXE files:

- the first one is marked 2007 32bit and it is supporting AutoCAD 2007, 2008 and 2009.
- second one is marked 2010 32bit and fully supports AutoCAD 2010 32bit.

We do not support 64bit versions of Autodesk software.

MENU FILES

AutoCAD 2010 brings whole new menu environment. Workspace is now saved inside CUIX file, one XML file where all the data about menus, toolbars, ribbons are saved. New files is bringing to us new API (application programming interface). That was the reason why we had to change our mechanism of loading/unloading menu files. User interface of our ARSOPS dialog is like before, but you will have to show much more patience while working with it. Any menu switched on needs time to be loaded. Sometimes not loaded menu files can be marked ON. You just have to switch it off and than on.

TOPO MENU

Save label state (TOG8) Restore label state (TOG9)

Fixed problem if both topo elements (sections and nodes) had the same name.

Terrain elevations (TOE1)

We are working on support for Civil3D 2010 DTM support inside of Series 6. At the moment C3D 2010 surface is not supported.
